

Maiora Technologies Launches Brand Presence and Investor Data Room With Per-Investor Analytics

The Singapore deep-tech energy company uses passwordless investor access and timestamps every document view. Built by Internal Automation.

KAILUA-KONA, HI · OCTOBER 16, 2026 · Maiora Technologies, a deep-tech energy company headquartered in Singapore, has launched a public brand presence and a gated investor data room, both built by Internal Automation.

Investors access the data room through email magic links issued with per-investor access keys, removing shared passwords from the process. Documents are rendered server-side within the room, with generated page thumbnails, so materials are read in place rather than distributed as files.

Every login and every document view is timestamped and attributed to an individual investor, giving the company a complete record of which materials have been reviewed and by whom.

The public site presents the company's thesis and open roles across three disciplines. A fifteen-shot storyboard for a launch film has been prepared for the company's public launch.

Maiora Technologies owns both systems, including the access controls and the viewing records.
